Department of the Environment, Water, Heritage and the Arts

Home Insulation Program Approved List of Products

To be eligible for the Home Insulation Program, insulation materials must meet the insulation product standard AS/NZ 4859.1:2002 (incorporating Amendment 1, Dec 2006) 'Materials for the Thermal Insulation of Buildings'.

The following products have been verified as meeting the Standard by relevant testing laboratories and certifying bodies.

NOTE: As at midnight 9 February 2010 the use of reflective (foil) insulation under the Home Insulation Program has been suspended. Please refer to the Program's website at: <http://www.environment.gov.au/energyefficiency> for more information.

Only the listed products can be used under the Program. The list will be updated regularly.

Installers, distributors and manufacturers can apply to have their product added to the list by asking the laboratory that tested the product to provide the Department directly with the brand name, name and type of the product; the R-value; the test certificate which clearly states the product conforms with the Australian Standard AS/NZ 4859.1, including labeling requirements; and a copy of the scope of the laboratory's accreditation.

The documentation must be sent to: Department of Environment, Water, Heritage and Arts, Home Insulation Program, Policy Development Team, GPO Box 787, Canberra ACT 2601.

Householders are responsible for selecting the type of insulation they wish to use and are strongly encouraged to seek expert advice from their installer on what materials will be the most effective for their specific circumstances.

The Program R-Value requirements for the particular climate zone as listed in the Program guidelines (page 8) apply.

Products that have been certified or have appraised have been placed at the top of this list. Certification or appraisal of products exceeds the requirements of the Australian Standard and the Program guidelines. The benefits of certification or appraisal include helping an organisation to achieve consistent business processes and drive measurable, cost-saving performance improvements. As such, householders and installers in choosing these products can have independent assurance that the product complies with the Standard and can be reproduced to the Standard consistently. For a product to be included in the Approved List of Products, the manufacturer or distributor is required to produce relevant documentation from a testing laboratory or certifying body confirming that the product has been tested and found to meet Australian Standard AS/NZ4859.1. The Commonwealth does not verify the accuracy or authenticity of the certificate or undertake any other action to verify that the product meets Australian Standard AS/NZ4859.1, any other standard, or its suitability for use in any particular application.
